

ECG Optimization & File Upload Guidelines

Optimizing ECG Settings

- Standard ECG speeds are **25mm/s or 50mm/s**.
- Waveform height (measured in millivolts) should be adjusted for clarity - large enough to analyze without overlapping other leads.

File Upload Protocol

- **File Format:** Our cardiologist **cannot** read files uploaded in the .ecg or DICOM formats. Please submit ECGs and radiographs in the **.png, .pdf, or .jpg** formats instead.
- **Upload Method:** All supplemental files should be uploaded using:
 - The link in your **confirmation email**, or
 - The upload link at the bottom of the **sonographer's report**.
- **Submission Deadline:** To avoid delays, all ECG files, radiographs, and other relevant documents must be uploaded by **5:00PM on the day the cardiology review request is submitted**. Late uploads may delay the cardiology report.
