

MOBILE VETERINARY IMAGING

Dear Pet Owners,

Thank you for entrusting us with your pet's care. Our priority is to provide the most accurate diagnostic results while ensuring your pet's comfort throughout the process.

To help us achieve this:

- **Fasting:** Please withhold food for 12-18 hours before the procedure (water is fine), unless otherwise directed by your veterinarian. A full stomach or intestines can create gas shadows, making it harder to get clear images and may cause discomfort during the exam.
- **Morning Drop-Off:** On the day of the procedure, drop your pet off in the morning as specified by your veterinarian. As we travel extensively and manage various cases, we cannot guarantee an exact arrival time but strive to provide the best care for every patient.
- **Sedation:** Your veterinarian may recommend sedation to keep your pet relaxed, as tension or panting can blur the ultrasound images. This ensures a more comfortable experience and accurate results.
- **Shaving:** To obtain clear images, we may need to shave your pet's fur where the ultrasound will be performed.

We appreciate your understanding and cooperation in helping us care for your pet.

Warm regards,

The Mobile Veterinary Imaging Team
